

Position Title: Electrical Engineer/Project Manager

Position Description:

SEI Engineering (SEIE) is a multi-discipline engineering firm affiliated with Solar Energy International. Our mission is to provide the foremost technical expertise in solar energy to empower people, grow businesses, and influence the global PV industry through best practices. SEIE is seeking a self-motivated, highly-experienced electrical engineer to join our design and management team full-time.

This position is for a licensed Electrical Engineer with significant experience with utility and commercial scale PV and energy storage projects who can execute various levels of design, analysis, and project management. Medium voltage and substation design experience on is preferred but not required.

The ideal candidate would have the ability to act as a lead technical designer and project manager for utility and commercial scale projects. This is a remote or in-house full-time position with some flexibility, however the candidate must be available during typical business hours, be able to communicate effectively, work independently, and collaborate with a remote team using a variety of software.

Candidates will be evaluated as interest is received. Resumes will be received until the position is filled. Send resumes to jeff@seisolarpros.com in PDF format.

Job Duties:

- Lead and participate in the design and development of electrical plan sets for mostly commercial and utility scale projects.
- Learn and enhance SEIE's plan-set template, standards, and best practices.
 - Design equipment layouts, installation details, and single-line diagrams (PV, MV, Auxiliary Power, Monitoring, etc.)
 - Manage design teams and collaborate with sub-consultants as needed
 - Interface with utilities and oversee the design of system interconnections
- Identify issues on projects and collaborate with the client, co-workers, and other managers to execute effective solutions
- Interact with team members, clients, vendors, installation contractors, and others to create efficient and cohesive designs
- Generate electrical diagrams for utility interconnection application processes
- Report the status of progress on each project to Senior Managers on a weekly or daily basis as needed

- Occasionally provide estimates of time to perform tasks
- Hold the highest level of integrity in every aspect of the work being performed

Skills and Qualifications:

- Licensed Professional Electrical Engineer
- High level understanding of National Electric Code (NEC) and other applicable codes
- Proven work experience in the Solar PV industry
- Medium-level proficiency in AutoCAD required
- Experience with PV system modeling software such as PVsyst, Helioscope and/or Homer preferred
- Energy storage system design experience preferred
- Ability to manage substation engineers and sub-consultants performing that task
- Ability to coordinate with all engineering disciplines to ensure a successful project
- Ability to communicate technical knowledge in a clear and understandable manner, and to act as a project leader of a PV design team
- Ability to take initiative and meet project timelines
- NABCEP Certification preferred
- Full-time commitment to the position with flexibility based on workload

Compensation:

Benefits package included. Salary based on experience. To be negotiated.
